## 'ricurme-Switches and Transducers

## Overview

The ACUAMP series is a family of high performance current sensors offering outstanding features, flexibility and durability at an incredible price. Choose from a wide selection of Current Transducer and Current Switch models, all designed in a rugged industry standard feedthrough package, consisting of both fixed core and split core models. Each model
has multiple inputranges (setby movable jumpers) for maximum flexibility across many current ratings. The current transducer output choices include 4-20 mA, 24 VDC loop-powered and 0-10 volt selfpowered analog outputs. The Current Switch outputs are isolated solid state switches and are available in Normally Open configurations. A unit featuring
field adjustable time delay is also offered in the Current Switch series. All models are panel-mountable as standard, and convenient DIN-rail adapter accessories are available. Use the selection guide to find the best sensor module for your requirements.

| AcUAMP Specifications by Model Type |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Frequency Range | -10 models: 50 to 60 Hz sinusoidal waveforms only -42L models: $20-100 \mathrm{~Hz}$ | 10 to 400 Hz non-sinusoidal waveforms | 6 to 100 Hz | 6 to 100 Hz | 50 to 100 Hz |
| Response Time | -10 models: 100 ms -42 models: 300 ms | 600 ms | 120 ms | 40 to 120 ms | Field adjustable time delay: 0.2 to 15 seconds |
| Sensing Aperture | -F core: $0.75^{\prime \prime}$ ( 19 mm ) dia. -S core: $0.85^{\prime \prime}(21.6 \mathrm{~mm})$ sq. | -F core: $0.75^{" 1}$ (19mm) dia. -S core: $0.85^{\prime \prime}(21.6 \mathrm{~mm})$ sq. | -F core: $0.75^{\prime \prime}$ (19mm) dia. -S core: $0.85^{\prime \prime}$ ( 21.6 mm ) sq. | -F core: 0.75 " ( 19 mm ) dia. -S core: $0.85^{\prime \prime}(21.6 \mathrm{~mm})$ sq. | -F core: $0.75^{\prime \prime}$ ( 19 mm ) dia. -S core: 0.85 " $(21.6 \mathrm{~mm})$ sq. |

## manfimp ACSX Series Switches

The ACSX series high-performance current-operated switch has a fieldadjustable time delay feature that minimizes nuisance trips during start-up and operation. These switches are designed for motor status applications where setpoint accuracy and repeatability are critical and offer a linear setpoint characteristic and constant hysteresis.

## Applications

## Motor Protection

- Serves as an electronic proof-of-operation; detects current draw changes in motors when they encounter problems such as pumps running dry or impending bearing failure
- Non-intrusive; less expensive to install than differential pressure flow sensors or thermal switches
- Much quicker response time than Class 10 overload relays

## High Inrush or Temporary Overload Current

- Adjustable start-up/delay timer allows $0-15$ second delay to eliminate nuisance trips from high inrush or short overload conditions

## Features

Standard features include self-powering, iumper-selectable ranges and a choice of outputs and core styles

- Five-year warranty
- Adjustable start-up/delay timer is fieldadjustable from 0.2 to 15 seconds to eliminate nuisance alarms caused by start-up inrush or temporary overcurrent conditions.
-Choice of N.O. AC or AC/ DC outputs: Contact ratings of 1.0A @ 240 VAC or universal outputs of 0.15A @ 240 VAC/VDC for use with most standard motor control systems.
- Improved ease of installation and use: - 1.0A rating eliminates need for time delay relay
- Self-powered, split-core models simplify installation
- Status LED provides visual indication of setpointtrip and contact action
- Industrial grade performance - constant hysteresis and linear setpoint response for greater accuracy

## Agency Approvals

UL, cUL Listed
CE approval pending
